Logical topology is the arrangement of devices on a computer network and how they communicate with one another. Logical topologies describe how signals act on the network. In contrast, a physical topology defines how nodes in a network are physically linked and includes aspects such as geographic location of nodes and physical distances between nodes. The logical topology defines how nodes in ...

- All right. Next up we are moving on to basic logical functions. So, these are your IF, AND, OR operators, your IFERROR. And these are gonna look very, very similar to how they look in Excel. And we're gonna shift gears a little bit. Up to this point, we've been using measures because we've been using statistical and math functions that return individual values, so they don ...

1 Introduction HCMOS data sheets specify, under recommended operating conditions, input  $t_t = 1000$  ns, (10%â€“ 90%) for  $V_{CC} = 2$  V.If certain devices are used in the threshold region (from  $V_{ILmax} = 0.5$  V to  $V_{IHmin} = 1.5$  V), there is a potential to go into the wrong state from induced grounding, causing double clocking.
