First normal form (1NF) is a property of a relation in a relational database. A relation is in first normal form if and only if the domain of each attribute contains only atomic (indivisible) values, and the value of each attribute contains only a single value from that domain. The first definition of the term, in a 1971 conference paper by Edgar Codd, defined a relation to be in first normal ...

In probability theory, a log-normal (or lognormal) distribution is a continuous probability distribution of a random variable whose logarithm is normally distributed. Thus, if the random variable X is log-normally distributed, then $Y = \ln(X)$ has a normal distribution. Likewise, if Y has a normal distribution, then the exponential function of Y , $X = \exp(Y)$, has a log-normal distribution.

Composition series A subnormal series of a group G is a sequence of subgroups $G = G_0 \supset G_1 \supset \dots \supset G_n$ such that G_{i+1} is normal in G_i ; for $0 \leq i < n$: The factors of the series are the quotient groups G_i/G_{i+1} . By the length of a series we understand the number of strict inclusions

1. Introduction. Stemming the obesity epidemic will depend in part on preventing excessive weight gain in those most susceptible to it. The ability to identify vulnerable individuals early in life would be valuable because preventing weight gain would be more cost-effective than trying to induce weight loss after weight has been gained (Hu, Liu, & Willett, 2011).

Weight suppression uniquely predicts body fat gain in
